

IMPORTANT PRODUCT INFORMATION

READ THIS INFORMATION FIRST

Product: **Memory Upgrade Kit for QuickPanel View/Control**
 IC754ACC32MEM-A

This document contains information that is not available in any other publication; therefore, we recommend you save it for future reference.

The memory upgrade kit provides an additional 32Mbytes of DRAM for QuickPanel View/Control products. The memory kit includes a 32megabyte memory expansion card in 100pin DIMM format. The memory card provides a 32 bit memory interface and operates at the full memory bus speed of 100Mhz. This affords maximum system memory performance while increasing the space for program execution or object storage.

Operational Notes

Observe all antistatic precautions and follow all installation instructions in the *QuickPanel View/Control Memory Module Quick Install Guide*, GFK-2276.

No additional setup after installation is required. The QuickPanel automatically recognizes and configures the memory on power up.

Functional Compatibility

This memory upgrade is compatible with the following QuickPanel revisions (or later) :

IC754VSL06CTD-CC
IC754VBL06CTD-CC
IC754CSL06CTD-CC
IC754CBL06CTD-CC
IC754CSF06CTD-AA
